

Eight-year DevSecOps/SRE engineer who started from closed-network OA operations and arrived at financial-exchange security operations. Driven by the conviction that *"repetitive work should be automated"*, I currently operate Splunk ES + n8n + FortiManager API for automated security-event detection and response on FortiGate HA five-tier segmentation at the Nextrade exchange (ITCEN CTS, 2025–2026). **I dogfood my own infrastructure: resume.jclee.me runs on Cloudflare Workers** — D1, KV, build-time HTML injection, Accept-Language routing, CSP strict-dynamic, validated 9 JSON-LD blocks across three locales.

WHY GITLAB INFRASTRUCTURE SECURITY (APAC)

- Cloud + container + Kubernetes background** — k3s on Proxmox (homelab production), Docker daily, Cloudflare Workers prod, Kubernetes (intermediate). Comfortable identifying misconfigurations across cloud / container / orchestration boundaries.
- IaC tools depth** — Terraform (homelab + Cloudflare), Ansible Role (financial security at scale), GitHub Actions CI/CD with cloudflare/wrangler-action@v3. Infrastructure-as-code is how I think.
- Development experience in Python · Go (learning)** — Python for security ops automation, n8n + FortiManager JSON-RPC API, Bash scripts. Gitleaks pattern detection in my self-hosted PR reviewer (Cloudflare Workers).
- Cross-functional collaboration in financial regulated environments** — FSC pre-licensing audit passed, FSS regulatory audit response. Comfortable communicating security trade-offs across legal / compliance / engineering boundaries.

CAPABILITY MATRIX VS ROLE REQUIREMENTS

Public Cloud	Cloudflare Workers prod · NSX-T private cloud · AWS SAA-C03 in prep	IaC Tools	Terraform · Ansible Role · Wrangler · GitHub Actions
Containers	Docker daily · k3s on Proxmox · Kubernetes (intermediate)	Languages	Python (security automation) · Bash · Go (learning) · Ruby (basic)
Linux / Systems	RHCSA · LPIC-1 · firewall-cmd · tcpdump · 8 yrs prod ops	Misconfig Detection	gitleaks patterns · RBAC checks · CSP nonce + strict-dynamic
Visibility / Telemetry	Grafana-as-code · Prometheus · Loki Promtail · Splunk ES	Cross-Functional	Financial regulators (FSC, FSS) · audit response · compliance
Remote Collaboration	Self-operated Cloudflare Worker production · solo PR ownership	Time Zone	Asia/Seoul (UTC+9) · APAC overlap · async-first

EXPERIENCE

Security Operations Engineer · Nextrade exchange · ITCEN CTS2025.03 – 2026.02

- Designed Splunk ES detection rules; operate an n8n + FortiManager JSON-RPC API automated detection / response pipeline.
- Streamlined alert path: Splunk Saved Search → n8n webhook → Slack/SMS routing.
- Automated firewall policy lookup via FortiManager JSON-RPC API, eliminating repetitive console operations.

Splunk ES n8n FortiManager API SOC ops

Security Infrastructure Engineer · Nextrade build-out · Gaonnuri2024.03 – 2025.02

- Designed FortiGate FGCP active-passive HA + 5-tier network segmentation; **passed FSC pre-licensing review**.
- Standardized policy distribution with Ansible Role to eliminate per-device drift.

FortiGate HA 5-tier seg. FSC licensing Ansible Role

FSDC Security Operations · Quantec Investment Management2022.08 – 2024.03

- Operated DLP policy framework and standardized audit deliverables for FSS regulatory inspections.
- Tuned DB access-control queries to materially lower CPU load; supported PB platform POC launch.

DLP FSS audit DB access control

NSX-T microsegmentation · Jointree (Kookmin Univ.)2021.09 – 2022.04

- Designed NSX-T DFW distributed firewall to remove east-west blind spots; built Wazuh OSS monitoring.

NSX-T DFW Wazuh

Contact-center Remote-Work Security · Metanet2019.12 – 2021.08

- Automated NAC exception handling, switch inspection, and new-terminal registration with Ansible.

Ansible NAC SSL-VPN

Closed-Network IT Operations · KAI · MT Data2017.02 – 2018.10

- Removed unused duplicate firewall rules across the closed-network Linux fleet via firewall-cmd parsing; established WSUS regular patch cycle.

firewall-cmd WSUS log analysis

SELECTED PROJECTS

- resume.jclee.me — Cloudflare Workers
- Production Worker (~390 KB) with D1, KV, Workflows; Wrangler GitHub Actions CI/CD.
 - Build-time HTML injection of version & deploy timestamp; Accept-Language redirect (/ → /en|ja); CSP nonce + strict-dynamic.
 - 9 JSON-LD blocks (KO/EN/JA) validated by Playwright E2E; canonical-per-locale guard.
- FortiManager API Client (Python)
- Wraps FortiManager & FortiAnalyzer JSON-RPC; ADOM locking + retry/backoff + idempotent calls; SOC adapter.
- AI GitHub PR Reviewer
- Self-hosted on Cloudflare Workers; gitleaks pattern + RBAC checks via GitHub Check Run API; CLIProxyAPI cost control.

EDUCATION & CERTIFICATIONS

- RHCSA · LPIC-1 · Linux Master Level 2 · CompTIA Linux+
- AWS Solutions Architect Associate (in prep, target Q3 2026)
